BASB081 gene translation product (see AAY95987). The invention provides BASB081 polypeptides, polynucleotides, expression vectors, host cells, and a process for producting a BASB081 polypeptide. Also provided are vaccine compositions comprising a BASB081 polypeptide or polynucleotide, and optionally at least 1 other M. catarrhalis antigen. A method for diagnosing a M. catarrhalis infection and the process identifying a BASB081 polypeptide, or an antibody that is immunospecific for it, in a sample. A therapeutic composition useful in treating M. catarrhalis diseases in humans comprises an cantibody directed against a BASB081 polypeptide. The disease can be a bacterial infection, e.g. otitis media in infants and children, pneumonia in elderlies, sinusitis, nosocomial infections and accumulation in the middle ear, auditive nerve damage, delayed speech learning, upper respiratory tract infection, and inflammation speech learning, upper
of the middle ear The present sequence is that of the Moraxella catarrhalis strain Mc2391 (ATCC 43617) BASB081 mature protein. BASB081 is related the amino acid sequence homology to Neisseria meningitidis omp85 outstance protein. The sequence was deduced from PCR-amplified DR (see AAA50537), and shows 99.9% homology to the mature region of Sequence 889 AA; sequence is that of the Moraxella catarrhalis

       The present sequence is that of outer membrane protein BASB067 of Haemophilus influenzae non-typeable (NtHi) strain 289. BASB067 is a Surface expressed protein that is recognised by the immune system. It shows homology to the protective surface antiqen D15 of H. influenzae and has a similar secondary structure. Its not beta-strands, and could be used as a vaccine antiqen. The anti-parallel, amphipathic beta-strands. The external loops of the beta-barrels of integral outer membrane proteins frequently

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 domain of BASB067 a strong candidate vaccine antigen. The invention relates to recombinant materials and methods for the production of BASB067 polypeptides and polynucleotides, for use relates to methods for using such polypeptides and polynucleotides in the prevention and treatment of microbial diseases. It also in the prevention and treatment of microbial diseases, in diagostic assays for detecting diseases associated with microbial infections, and assays for detecting expression or activity of BASB067 polypeptides or polynucleotides. Antibodies raised against humans with H. influenzae disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        537

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C N-terminal domain is predicted to contain a mixture of alpha-helix c and beta-strands, and could be used as a vaccine antigen. The C C-terminal domain is predicted to form a beta-barrel composed of anti-parallel, amphipathic beta-strands. The external loops of the beta-barrels of integral outer membrane proteins frequently C contain immunodominant B-cell epitopes, making the C-terminal C domain of BASB067 a strong candidate vaccine antigen. The invention relates to recombinant materials and methods for the production of BASB067 polypeptides and polynucleotides, for use c specially in therapeutic and prophylactic vaccines. It also crelates to methods for using such polypeptides and polynucleotides in the prevention and treatment of microbial diseases, in diagostic assays for detecting diseases associated with microbial infections, and assays for detecting expression or activity of BASB067 c nolynearides are nolynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC reduction of virulence compared to the wild type cell. The attenuated CC cells are used as carriers for presenting bacterial, viral or tumour CC antigens to a host and are capable of expressing the antigen in a target CC cell, especially a macrophage. The cells may therefore be used for the CC preparation of a prophylactic or therapeutic composition for the CC treatment of a chronic disease caused by a bacterium or virus, e.g. CC Salmonella infection or a tumour The cells may also be used to vaccinate CC against a range of bacterial and viral pathogens e.g. Helicobacter pyloric CC associated with stomach cancer), Chlamydia pneumoniae (associated with CC arteriosclerosis and Alzheimer's disease), Borrella burgdorferi, CC Nanobacteria (found in the chronically diseased kidneys of patients CC with crystalline deposits), Hepatitis virus (causative agent of CC Hepatitis B and C and associated with liver cancer), Human papilloma CC virus (HPV) (associated with cervical cancer) or Herpes virus.

CC The present sequence is the SseF protein, an effector of type III cous of salmonella. Inactivation of the cancer of the section system, from the SPIZ locus of Salmonella.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        from two different but related genes. It is clear that a gene family exists and further members are likely to be found. The 91 kD protein has the capability of acting as a translation protein and as a DNA binding protein in response to interferon-gamma stimulation. These proteins participate in rapid phosphorylation and dephosphory-lation during the course of, and as part of their activity. This phosphorylation takes place in an interferon-dependant manner on specified tyrosine residues. These proteins may be used in conjunction with interferon therapy eg. to treat chronic viral hepatitis, hairy cell leukaemia and for use with interferon in

              kinase complexes followed by nuclear translocation and DNA binding to activate transcription. The amino acid sequence of STAT2 was deduced from a cDNA clone (AART31275) derived from HeLa cells. STAT includes a DNA-binding domain (see also AAW03175) capable of both receptor recognition and message delivery via DNA binding in a receptor-ligand specific manner. STAT procleins and their DNA binding domains (see also AAW03167-76) are useful for screening antagonists used to inhibit STAT-mediated signal transduction and activation of transcription.
Sequence
                                                                                                                                 Signal transducer and activator of transcription (STAT) protein STAT2 (AAW03166), also known as STAT113, is a 113 kDa protein having a dual purpose, i.e. signal transduction from ligand activated receptor

               The present invention relates to a crystal of an N-terminal fragment of a signal transducer and activator of transcription (STAT) protein. The crystal effectively diffracts X-rays, allowing the determination of the atomic coordinates of the N-terminal domain to a resolution of greater than 5.0 Angstroms. The present sequence is the N-terminal domain of the human STAT 2 protein. The N-terminal domain enables STAT dimers to interact and bind DNA cooperatively, a mechanism important for gene activation. The crystals are useful in drug screening and development by selecting a potential drug by performing rational drug design with the 3-dimensional structure determined for the crystal.
                                                                                                                                                                    New crystals of an N-terminal fragment of a activator of transcription that effectively
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                08-NOV-2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches
                                                   STAT dimer. The core portion comprises a coiled-coil domain comprising 4 long helices, a DNA binding domain which contains an immunoglobulin-like fold, a C-terminal SH2 domain and a domain that links the DNA binding and SH2 domains. The crystal is of sufficient quality to perform x-ray crystallography studies. Methods of preparing the crystals are included in the invention. Knowledge of the STAT protein's 3-dimensional structure will aid in structure-based drug design. The crystal can be used in drug screening assays to
                    identify agonist and antagonist compounds. Antagonists can be use to treat inflammation, allergy, asthma and leukaemia, and agonists to treat anaemia, neutropenia, thrombocytopenia, cancer, obesity,
                                                                                                                                                 The present sequence is that of human signal transducer and activator of transcription 2 (STAT-2). The invention provides crystal of a core portion of a STAT protein in dimer form with 18 mer duplex DNA (see AAA89233) that contains a binding site f
                                                                                                                                                                                                                                    Novel crystal useful in drug screening assays, con signal transducer, activator of transcription and

The present invention relates to a method for monitoring acceptance of a C transplant or an autoimmune disease in a mammal. The method comprising content of the amount of at least one of Stat4 (signal transducer and content of transcription), Stat6, SOCS1 (suppressor of cytokine content of transplant of transplant of the host or an affected tissue sample of the transplant, taken content of transplant of the method is used to determine whether acceptance of a transplant content of the method is used to determine whether acceptance of a transplant content of the method is used to determine whether acceptance of a transplant content of the method is used to determine if autoimmune disorders (systemic content of the method is used to determine if autoimmune disorders (systemic content of the method is used to determine if autoimmune disorders (systemic content of the method is used to determine if autoimmune disorders (systemic content of the method is used to determine if autoimmune disorders (systemic content of the method is used to determine if autoimmune disorders (systemic content of the method content of transplant of the method content of transplant of transplant of transplant of the method content of the method content of the method content of the method is used to determine if autoimmune disorders (systemic content of the method is used to determine if autoimmune disorders (systemic content of the method co

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                                                                                  polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fire, wipo.int/pub/published_pct_sequences.

CC polymertide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II) rhe conjuncted the polymerestides are also used in diagnostics as expressed sequence tags of restore normal activity of (II) or to treat disease states involving CC quantitating a polypeptide in tissue, as molecular weight markers and as conjunction of supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating cC disorders involving aberrant protein expression or biological activity. CC dispnostics, forensics, gene mapping, identification of mutations in CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent movel human cCC specification, but was obtained in electronic format directly from WIPO car af ftp wipo, intromb/oublished nor sequences.

                                                                                                        CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC continued expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful in diagnostics as expressed sequence tags (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as continued for sites expressing (II). (II) and its binding partners are useful in medical coinciders involving aberrant protein expression or biological activity. (C diagnostics, forensics, gene mapping, identification of medical cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and consolid sequences. ABG00010-ABG30377 represent novel human consolid sequence data for this patent did not appear in the printed cat first. but was obtained in electronic format directly from WIPO cat of the twist of the sequence of the invention.

                                                                                                                                                                                                                                                                                                                                                  The present sequence represents an antigenic protein originating infectious laryngotracheitis virus (ILTV). The DNA sequence can be incorporated into recombinant viruses (such as fowlpox, avipox or chickenpox virus) and used to produce vaccines. The vaccines are a effective means of protecting birds such as chickens, pheasants or turkeys against infectious laryngotracheitis.

         The two cleavage sites of B. licheniformis alpha-amylase signal peptide may give rise to two different mature proteins (AAR44429). To obtain a proper mature prod., the second recognition site has to be destroyed without interfering with the first recognition site. The combination of the B. licheniformis alpha-amylase
   signal sequence
                                                                                             Claim

                                                                                                                                                                                                                                                                                                                                                                                    Bacillus licheniformis; alpha-amylase;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         site. The combination of the B. licheniformis alpha-amylase signal sequence with human II-3 shows a third possible cleavage site since mature II-3 starts with Ala (AAR51699). In practice the third site is not used, as the signal peptidase is not active when the Ala-X-Ala is upstream of a Pro.

Mutant signal sequences with fewer potential cleavage sites reduce the processing ambiguity of signal peptidases. Mutated Bacillus alpha-amylase sequences in combination with II-3 are illustrated in AAR44425-28
                                                                                                                                                                                                                                                            25-маү-1993;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                            signal sequence with human IL-3 shows a third possible clear site since mature IL-3 starts with Ala (AAR51699). In pract the third site is not used, as the signal peptidase is not active when the Ala-X-Ala is upstream of a Pro.

Mutant signal sequences with fewer potential cleavage sites reduce the processing ambiguity of signal peptidases.

Mutated Bacillus alpha-amylase sequences in combination with
                                                                                                                                                       The two cleavage sites of B. licheniformis alpha-amylase signal peptide may give rise to two different mature proteins (AAR4429). To obtain a proper mature prod, the second recognition site has to be destroyed without interfering with the first recognition site. The combination of the B. licheniformis alpha-amylase
Sequence
                                                   IL-3 are illustrated in AAR44425-28

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              site since mature II-3 starts with Ala (AAR51699). In practithe third site is not used, as the signal peptidase is not active when the Ala-x-Ala is upstream of a Pro. Mutant signal sequences with fewer potential cleavage sites reduce the processing ambiguity of signal peptidases. Mutanted Bacillus alpha-amylase sequences in combination with II-3 are illustrated in AAR44425-28.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           26-MAY-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR44427;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qy
                                                                     Query Match
                                                                                                                                         peptide may give rise to two different mature proteins (AAR44729). To obtain a proper mature prod., the second recognition site has to be destroyed without interfering with the first recognition site. The combination of the B. licheniformis alpha-amylase signal sequence with human IL-3 shows a third possible cleavage site since mature IL-3 starts with Ala (AAR31699). In practice the third site is not used, as the signal peptidase is not active when the Ala-X-Ala is upstream of a Pro. Mutant signal sequences with fewer potential cleavage sites reduce the processing ambiguity of signal peptidases. Mutated Bacillus alpha-amylase sequences in combination with TL-3 are illustrated in AAR4445-28.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptidase; mature protein; recognition site; mutant; cleavage site; interleukin; IL-3.

                                                                                                                                                            AAW51936 standard;
                                                                                                                                                                                                                                                                                                                                                                                                      AAR74559 is the protease Nexin-1 (PN-1) N-terminal peptide, it was used to isolate the complete PN-1 sequence, from which the active site variants described in AAR74533-R74546 were derived. These variants have different protease specificities and/or increased rate association
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protease Nexin-1 N-terminal peptide; PN-1; variants; protease inhibitors; urokinase inhibitor; inflammati tumour cell invasion; elastase inhibitor; emphysema;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This amino acid sequence comprises an N-terminal peptide of human C protease nexin I (PN-1, see also AAW51933-34) isolated from human C foreskin fibroblasts. Claimed chemically modified PN-1 variants C (see AAW30592-56) comprise PN-1 polypeptides in which the amino acid cresidues at positions adjacent to the reactive site centre are which at least cysteine residue of the polypeptide is coupled to CC which at least cysteine residue of the polypeptide is coupled to CC polyethylene 91ycol (PEG). Other claimed PEGylated PN-1 variants CC proteins have a prolonged half-life in vivo. They cause decreased CC immunogenicity and antigenicity while retaining the same level of CC polyethylene 1 capable of inhibiting elastase in the presence of CC proteins have a prolonged half-life in vivo. They cause decreased CC biological activity as the naturally occurring protein. Specific CC PN-1 variants are capable of inhibiting elastase in the presence of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a method of modulating insulin activity in mammalian cells by administering a peptide that binds the insulin receptor (IR). A composition containing a peptide, optionally expressed agonist are useful for treating diabetes. Also, peptides that are useful for treating diabetes. Also, peptides that are useful for treating insulin-like growth factor (IGF-1) receptor are (e.g. of prostate and breast) and diabetic retinopathy, while IGF-1 including stroke and diabetic neuropathy. The peptides are also useful including stroke and diabetic neuropathy. The peptides are also useful interapeutics and research reagents. AAU88034-AAU90957 represent IR and/or IGF-1 receptor-binding peptides and related amino acid sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

CC AAX43052. The 5' ESTs can be used for proteins. AAX64651 to AAX6343052. The 5' ESTs can be used for producing secreted human gene CC Products. They can be used for producing secreted human gene CC Products. They can be used to identify and isolate 5' untranslated CC Iocation, development stage, rate, and quantity of protein synthesis, as CC chromosome mapping, and to obtain full length cDNA clones. The ESTs can CC diagnostic procedures to identify individuals, or in CC diagnostic procedures to identify individuals, or in CC diagnostic procedures to identify individuals, or in CC constituting from abnormal gene expression. The products may also be used in core as the expression. The products may also be used in core as the core of the case of constituting from abnormal gene expression. The products may also be used in core of a polypeptide or the core of the

Cardiovascular system antigens and their associated polynucleotides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in cardiovascular system antigen polynucleotide. The treatable disorders include autoimmune diseases such as reumatoid arthritis, hyperproliferative disorders such as repulsams of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as cardiac arrest.
                                                                                                                                                                                                                          Note: The sequence data for this patent did not specification, but was obtained in electronic for at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                            Alzheimer's disease, infections caused by bacteria, viruses and fungi, ocular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as Crohn's disease, renal disorders such as glomerulonephritis and respiratory disorders such as asthma and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in
                                                                                                                                                                                                                                                                                  chemotaxis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 11;

(I) have cytostatic activity, and can be used in gene therapy and vaccine production. (I) cc proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For cexample, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome ct that affect the activity of (I) by expressing inactive proteins or to supplement the patients own production of (I). Additionally, (I) collective proteides may be used to produce the secreted (I), by inserting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to prevent, and diagnose and treat immune/haematopoietic related diseases, especially cancers and cancer metastases of haematopoietic antigen genomic sequences from the present invention. AAK54942 to AAK54950 and AAM82169 cancers the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches

human secreted proteins, and encode the proteins given in AxY11374 to CAXY11531, respectively. The proteins given represent the signal peptide cand an N-terminal fragment of a secreted protein. The nucleic acid cand an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for products for diagnosis and therapy. The CC can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell crotiferation/differentiation activity, haematopoiesis regulating cc regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, chemotactic/ chemokinetic activity, haematory crotiferation activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping promoter The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for oliventide into a cell of a colventide into a cell of a

The colon cancer antigens have cytostatic activity and can be used in gene diagnosis and vaccine production. N and P may be used in the prevention, expression. For example, N and P may be used to treat disorders in a patient's genome that affect the activity of P by expressing in a patient's genome that affect the activity of P by expressing in a patient's or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 necessity expresent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents a secreted human protein encoded by the nucleic acid molecule designated Gene 146 from the human cDNA clone HSNAKI7 (deposited as clone ATCC 97903 and ATCC 209049).

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions can be diagnosed by determining the amount of the new polynucleotides. Specific uses are described for each of the 186 notward the new polynucleotides. Specific uses are described for each of the 186 notward the new polynucleotides.

The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream
                                                                                                                                                                                                                                                                                                                                                                         482 FSASNLI 488

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs different tissues. EST sequences usually correspond mainly to the 3' from oligo-dT primed cDNA libraries. Such ESTs are not well suited for those cases where longer cDNA sequences have been obtained, the full 5' ends and can therefore be used to obtain full length cDNAs and genomic chromosome mapping procedures. They are used to obtain upstream converges and to design and to design serior and secretion vactors.

                                                                                                                                                                                                                                                                                                                                                                        conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                         The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Fc portion (e.g. AAV59502) for increasing the stability of the fused protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated human genes and the secreted polypeptide(s) they encode - useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
                                                          Human ORFX protein sequence SEQ ID NO:11310.

ORFX polynucleotide sequences can be used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, cirrhosis of liver, psoriasis, benign tumours, keloid, degenerative disorders related to organ transplantation, cardiovascular diseases, diabetes mellitus, systemic transplantation, cardiovascular diseases, diabetes mellitus, systemic transplantation, cardiovascular diseases, diabetes mellitus, systemic trupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune deficiencies and disorders, infectious diseases, autoimmune disorders such as multiple sclerosis, rheumatoid arthritis, autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut

                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format direfrom WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -

```
cc new antimicrobial agents, and for identification of compounds which conteract with the gene products of (I). In addition the expression of (I) and the purification of the proteins, the purified proteins can be cused to generate reagents and screen small molecule libraries or other candidate compound libraries for compounds that can be further developed to yield novel antimicrobial compounds. In addition, nucleic acid probes complementary to (I) that are specific for particular species of complementary to (I) that are specific for particular microorganism species in clinical specimens, therefore, providing a rapid and dependable comethod by which to identify the causative agents of a bacterial infection. Also, antibodies generated against proteins translated from mRNA transcribed from proliferation-required sequences can also be used to screen for specific microorganisms that produce such proteins in a species-specific manner. AAH84371 and AAH8470 represent sequencing primers used in the isolation of E. coll growth and proliferation related sequence, which are used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                   AAH84373 to AAH84499 represent Escherichia coli growth and proliferation related DNA sequences (I). AAH84500 to AAH84670 encode the E. coli growth and proliferation related proteins given in AAG99078 and AAG98830 to AAG98999. (I) can be used as potential targets for the generation of new antimicrobial agents, and for identification of compounds which
